ANCIENT MEMPHIS

WALK INTO HISTORY

A WALK THROUGH THE WHITE WALLS

The past becomes a place you can enter.

A VR-first living-history start-up: put on a headset and enter a historically plausible ancient Memphis district, from the Nile landing to the early Ptah precinct.

The flagship: a high-end, immersive headset experience.
The companion: a simplified tour in your browser.

VR-FIRST VISION / WORKING BROWSER PROTOTYPE

Investor & venture partner brief • Updated 22 October 2026

THE FLAGSHIP / IMMERSIVE VR

Put on a headset. Step into ancient Memphis.

The core product vision is presence: looking around a life-size ancient city, sensing its scale and exploring it from within.

Oculus Rift

PC VR REFERENCE

Illustrates the PC-connected VR experience: an immersive view into a world rendered by a computer.

Meta Quest 3

STANDALONE VR TARGET

A proposed route to accessible headset experiences at home, in classrooms and at cultural venues.

Apple Vision Pro

SPATIAL COMPUTING OPPORTUNITY

A potential premium immersive edition, requiring a dedicated visionOS delivery and validation path.

Experience goal: stereoscopic depth, natural head movement, spatial sound and comfortable exploration. Hardware shown illustrates the vision; compatibility is not yet certified. Rift is a legacy PC VR reference, not the proposed launch device.

Photos (resized): Rift: Evan-Amos, public domain; Quest 3: Kyu3a, CC BY-SA 4.0; Vision Pro: Hay Kranen, CC BY 4.0. No manufacturer endorsement implied.

HOW IT IS BUILT / TWO DELIVERY PATHS

One historical world. VR first. Browser alongside.

A shared content foundation keeps the historical story consistent while each version is tuned for its device and audience.

SHARED CONTENT & PRODUCTION TOOLS

Historical research • Evidence records • Scene and route data • 3D assets • Source provenance

01 FLAGSHIP HEADSET EXPERIENCE

Unreal Engine / Unity

The planned high-end VR path: cinematic environments, detailed materials, lifelike animation, spatial audio and headset-specific interaction and comfort.

Engine strategy: Unreal is the primary target; Unity is an alternative adapter for platform or production needs.

02 SIMPLIFIED BROWSER COMPANION

TypeScript + Babylon.js

A lighter experience designed for laptop browsers and broad access. WebGL today, with a WebGL-WebGPU direction for future rendering development.

Role: easy discovery, demonstrations and learning access. The existing browser prototype can request WebXR.

Current implementation: browser prototype and shared data contracts. Unreal remains a project shell; Unity is reserved. Engine import bridges, headset-specific builds and performance/comfort validation are production milestones, not completed features.

THE PROTOTYPE TODAY / FOUNDATION FOR VR

A small world. A credible foundation.

A calm first-person walk through living history, with a configured 210-second guided route and optional exploration.

01 White Walls threshold

02 Craftsmen area

03 Early Ptah precinct

CURRENT PROTOTYPE

Browser-rendered district, route playback, ambient movement and soundscape controls. Compatible browsers can request a WebXR session.

TRUST AS A PRODUCT FEATURE

An evidence view separates confirmed, inferred and speculative reconstruction, with claim-level notes and source links.

WHAT COMES NEXT

Cinematic materials, natural character motion and headset comfort validation. Unreal is a project shell; Unity is reserved. Neither is a finished VR release.

Images: user-supplied browser screenshots. Prototype visuals are distinct from the reference imagery on pages 1, 8 and 9.

WHO IT CAN SERVE

One reconstructed district. Several doors in.

Proposed initial focus: immersive VR at cultural and education venues, supported by an accessible browser preview.

01 Museums & heritage venues

An immersive introduction before visitors encounter collections or ruins.

Buyer: exhibitions or digital interpretation team.
Paid pilot, then a venue content licence.

02 Schools & universities

A guided visual setting for discussing daily life and how historical evidence is interpreted.

Buyer: department, school or learning provider.
Annual institutional access plus teaching packs.

03 Tourism & cultural travel

A preview of ancient urban life before a trip, or an interpretive experience on location.

Buyer: visitor centre, tour operator or hotel group.
Branded licence or bundled visitor access.

04 History enthusiasts & VR venues

A focused, atmospheric journey for curious audiences and future headset visitors.

Buyer: individual visitor or venue operator.
Premium episodes; later ticketed VR sessions.

Category precedent: Excurio markets Horizon of Khufu, an immersive Egyptian heritage experience [1]. This establishes a relevant category, not demand or revenue for this project.

Positioning hypothesis: headset presence + everyday city life + transparent evidence.

PROPOSED MONETIZATION

Sell a place to explore. License a world to teach.

Build toward paid VR venue and institutional pilots; use the browser companion for discovery, demonstrations and wider reach.

REVENUE STREAM	COMMERCIAL DESIGN	WHAT MUST BE PROVEN
Institutional licences	Paid pilot → annual site or institution licence. Charge separately for onboarding and localisation.	Renewal intent, manageable support effort and repeat use by teachers or visitors.
Premium consumer tours	Free short preview → one-time paid episode or multi-tour bundle. Subscriptions only after a larger catalogue exists.	Conversion, acquisition cost, completion and willingness to buy another journey.
Venue VR distribution	Content licence and/or per-ticket share with an operating partner once headset delivery is validated.	Comfort, session throughput, reliable operation and partner economics.
Commissioned experiences	Funded adaptations for museums or destinations, with reusable content and rights agreed in the contract.	Delivery margin, controlled scope and a repeatable production process.

Economic discipline Track net receipts after platform fees or partner share, hosting, support and content upkeep. Recover research and production costs across repeat licences before expanding the catalogue.

Status: these are proposals. No pricing, revenue, customers or signed partnerships were substantiated by the reviewed repository.

THE NEXT INVESTABLE MILESTONE

From browser prototype to flagship VR pilot.

Fund a cinematic headset experience, prove comfort and performance, and test its commercial value with real partners.

BUILD

A cinematic VR slice

Bring the locked hero street into the chosen VR engine. Develop materials, lighting, natural motion, spatial sound and headset interaction.

VALIDATE

A headset-ready experience

Test frame rate, input, seated/standing use and comfortable locomotion on chosen headsets. Add reviewed narration and learning content.

COMMERCIALISE

A paid institutional pilot

Recruit pilot partners, instrument completion and satisfaction, test pricing, and seek renewal or expansion commitments.

Reusable foundation. TypeScript/Babylon.js browser runtime, shared route and evidence contracts, source register and generated asset pipeline. Reuse across future engines is an architectural intention, not yet proven production portability.

Execution risks. Visual quality remains below the references. Headset performance and comfort need testing; historical review and media rights need clearance. The reviewed app has no established billing or commercial analytics flow.

Partner invitation: fund the flagship VR slice, supply curatorial expertise or host a headset pilot. Funding size, team plan and delivery dates should follow a costed production scope; no forecast or investment return is implied.

Review basis, 8 Oct 2026: CODEx_handoff.MD; README.md; README_ABOUT.MD; browser UI and scene code; shared contracts; tour/evidence manifests; engine notes and production roadmap. Static checks recorded in the companion review notes; no headset test performed.

Primary product source, consulted 8 Oct 2026.
No partnership with Excurio is represented.

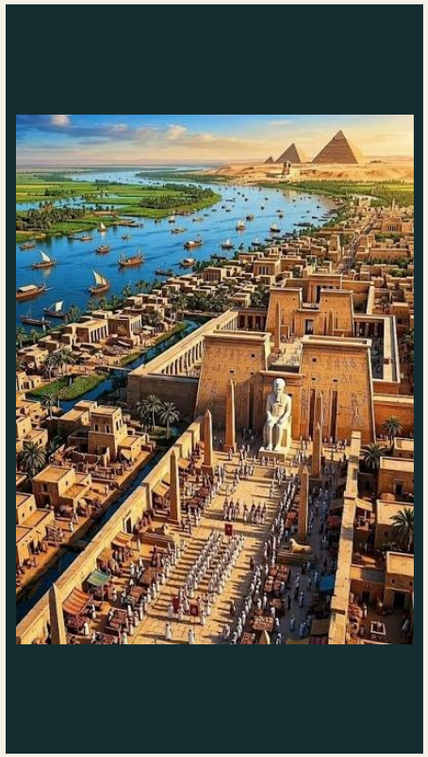

VISUAL AMBITION / SUPPLIED REFERENCES

The feeling: “I was there.”

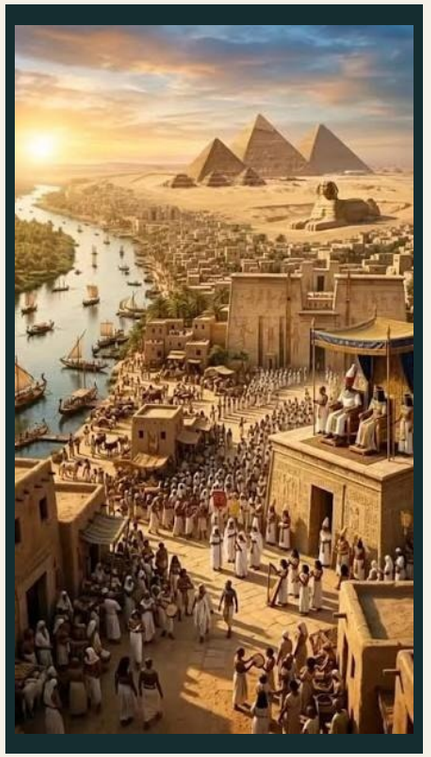

Warm light, tactile surfaces, atmospheric depth and everyday life. These images communicate ambition; they are not current application output.

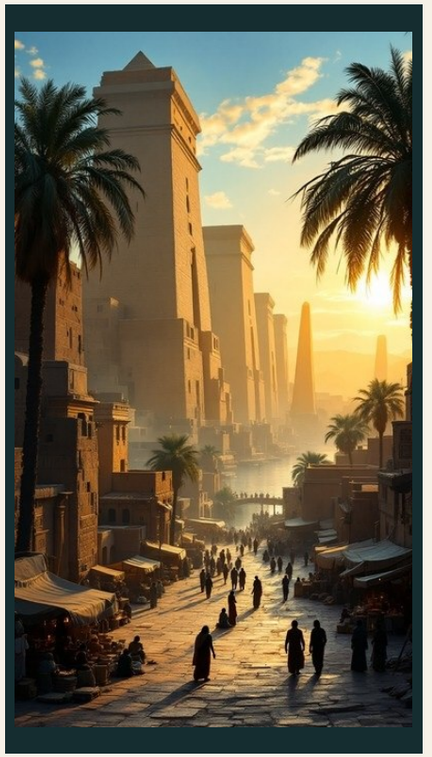

Street life & material detail

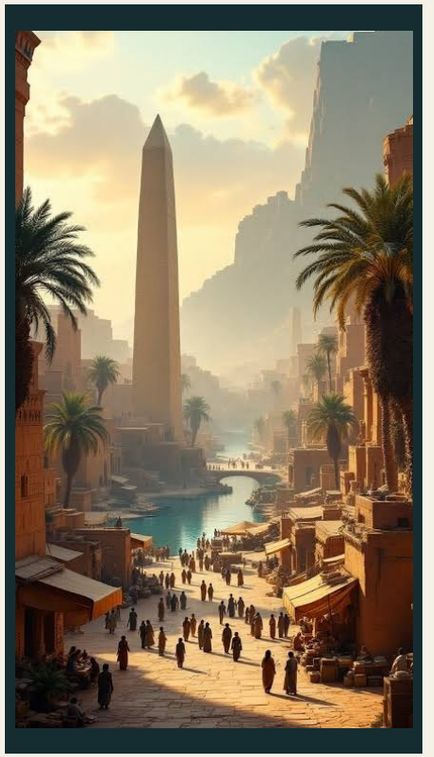

Urban scale

Crowds & light

Atmosphere

Depth & colour

Visual references span different periods and artistic interpretations, including New Kingdom and monumental imagery. They guide mood only; the product remains scoped to Early Dynastic / Old Kingdom Memphis.

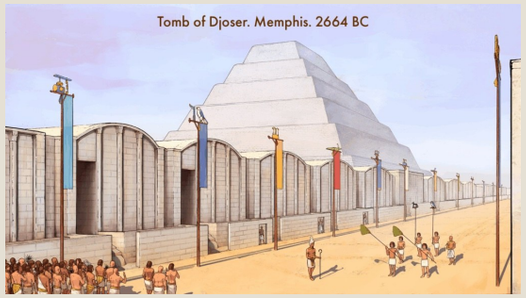

REFERENCE COLLECTION / SUPPLIED IMAGERY

A shared visual language for the next chapter.

Architecture, riverfront life, colour and composition: a compact visual brief for production and investor discussion.
